

Advanced UI Design and Design Systems

CURRICULUM OVERVIEW · AGILE DESIGN SCHOOL

Duration: 3 months · **Level:** 1+ yr experience · **Format:** Live cohorts (weekday evening / weekend / blended) · **Fee:** Rs. 55,000 (EMI available; scholarship discounts up to 30% via the Scholarship Entrance Test)

For designers who want stronger interface quality, cleaner screens and confident developer handoff — plus design systems that scale.

Who should join

- Product and UI designers with 1+ year who want stronger craft
- Design leads inheriting inconsistent screens and messy files
- Front-end developers collaborating on systems
- Solo startup designers who are the design system

Curriculum, stage by stage

Weeks 1–3 · Interface Craft

Advanced typography, colour systems, spacing, grids and visual hierarchy — screens that hold up at pixel level.

Weeks 4–6 · Components & Tokens

Figma components, variants, properties, variables and modes; token architecture and theming.

Weeks 7–9 · Systems at Scale

Documentation developers read, accessibility as a system property, versioning and governance.

Weeks 10–12 · Handoff & Audit

Developer handoff, design–code parity, and a final live audit of your system by a practising systems lead.

Learning outcomes

- Ship interface work that survives pixel-level inspection
- Architect tokens, components and theming that scale
- Bake accessibility in as a system property
- Hand off to developers with confidence — and documentation they read

Assessment & certification

Assessment is based on real project work and a final live portfolio jury — never attendance. Graduates receive a certificate with a unique, verifiable ID; assessment rubrics are public.
