

PG Programme in UI/UX & AI Product Design

CURRICULUM OVERVIEW · AGILE DESIGN SCHOOL

Duration: 12 months · **Level:** Graduates & working professionals · **Format:** Live cohorts (weekday evening / weekend / blended) · **Fee:** Rs. 2,50,000 (EMI available; scholarship discounts up to 30% via the Scholarship Entrance Test)

A 12-month, AI-first postgraduate programme that takes you from learner to shipping product designer — interface craft, UX research, AI-native design patterns and real product cycles with live teams, ending in a jury-defended portfolio of shipped work.

Who should join

- Fresh graduates from any stream aiming at AI-era product design careers
- Early-career designers formalising their skill into a PG-level credential
- Working professionals switching into product design via the weekend online path
- Builders who want to ship real products — not just make mockups

Curriculum, stage by stage

Term 1 (Months 1–3) · Foundations of UX & Interface Craft

Research fundamentals with real participants from month one; interaction design; typography, colour and layout systems; Figma at professional depth — auto layout, components, variables. Exit with your first tested, defensible flows.

Term 2 (Months 4–6) · Product Thinking & Systems

Product discovery and problem framing; metrics and experimentation literacy; design systems and tokens; developer handoff through Dev Mode. Includes a full design sprint alongside engineers and product managers.

Term 3 (Months 7–9) · AI-Native Product Design

Patterns for chat, copilots and agent interfaces; prompts as a design material; uncertainty, confidence, trust and graceful failure; AI-augmented research and production workflows. Build and test an AI-powered feature end-to-end.

Term 4 (Months 10–11) · Live Product Cycles

Industry briefs with partner teams under real constraints — dark-pattern audits and retention redesigns, checkout-recovery challenges, an internal AI-copilot dashboard. You ship work that has users, deadlines and trade-offs.

Term 5 (Month 12) · Portfolio, Jury & Placement

Case studies of shipped work — problem, evidence, decisions, outcome; external jury defence before senior designers; interview and negotiation coaching; placement drive into the 450+ company network.

Learning outcomes

- Design and ship end-to-end product flows with real teams and constraints
- Apply AI-native patterns — chat, copilots, agents, trust and failure states
- Run design sprints alongside engineers and product managers
- Defend a portfolio of shipped, documented work before an external jury

Assessment & certification

Assessment is based on real project work and a final live portfolio jury — never attendance. Graduates receive a certificate with a unique, verifiable ID; assessment rubrics are public.
